ORDNANCE AND EXPLOSIVE WASTE
ARCHIVES SEARCH REPORT
For the former
SAN BERNARDINO ENGINEER DEPOT
SAN BERNARDINO, CALIFORNIA
PROJECT NUMBER J09CA058402

1. INTRODUCTION

a. **Subject and Purpose**

(1) This report presents the findings of an historical records search and site inspection for ordnance and explosives waste (OEW) presence located at the former San Bernardino Engineer Depot. The investigation was performed under the authority of the Defense Environmental Restoration Program for Formerly Used Defense Sites (DERP/FUDS).

(2) The purpose of this investigation was to characterize the site for potential OEW contamination, to include conventional and chemical warfare material (CWM). This was achieved through evaluation of all historical records available, interviews, and the on-site visual inspection results.

b. **Scope**

(1) The investigation focused on 1662.82 acres of land that was used by the Army as an engineer supply depot supporting the Los Angeles Port of Embarkation (LAPE) during WW II.

(2) This report presents the site history, site description, real estate ownership information, and confirmed ordnance presence based on available records, interviews, and the site inspection. It further provides a complete evaluation of all information to assess actual and potential current day ordnance contamination.

(3) For the purpose of this report, Ordnance and Explosives Waste (OEW) is considered unwanted and abandoned ammunition or components thereof, which contain or contained energetic, toxic, or radiological materials, and was manufactured, purchased, stored, used, and/or disposed of by the War Department/Department of Defense.

2. PREVIOUS INVESTIGATIONS/PROJECTS

a. 1993 Preliminary Assessment

(1) A Preliminary Assessment of San Bernardino Engineer Depot was conducted under the Defense Environmental Restoration Program, Formerly Used Defense Sites (DERP/FUDS) by the Corps of Engineers, Los Angeles District contractor, MESA Engineering, Inc. (reference B-4). At that time, The Findings and Determination of Eligibility (FDE), dated 9 November 1993, concluded that the 1662.82 acre site had been formerly owned or used by the Army (see document E-1).

(2) The FDE concluded that there were eligible categories under the DERP/FUDS program. Since the site was found to have been used as an engineer supply depot by the Army, an Ordnance and Explosives Waste (OEW) project was recommended, DERP FUDS Project Number J09CA058402, which is the principal subject of this report (see document E-2).

TABLE 2-1
DERP-FUDS PRELIMINARY ASSESSMENT PROJECTS

Project Number	DERP Category	Present Phase	Comments	Location
J09CA058402	OEW	SI	Ordnance and Explosive Waste	San Bernardino, CA
	BD/DR	-	None Recommended	
	HTRW	-	None Recommended	

b. Other Investigations

Previous investigations were discovered during the Archive Search included an investigation of contaminated ground water (see document E-5) as well as a completed ASR for an adjacent site that was a Chemical Warfare Bomb Loading Plant for the manufacture of incendiary bombs (see reference B-4).

3. SITE DESCRIPTION

a. Existing Land Usage

(1) San Bernardino Engineer Depot was located in San Bernardino County, 4 miles north and west of San Bernardino, California.

(2) San Bernardino Engineer Depot consisted of 1662.82 acres of range and scrub land. The land is used for ranching, an industrial park and for residential home sites, state highway and a railroad right of way.

(3) Table 3-1 shows current land usage.

TABLE 3-1 CURRENT LAND USAGE					
AREA	FORMER USAGE	PRESENT OWNER	PRESENT USAGE	SIZE/ ACRES	COMMENTS
A	Storage	Various	Industrial	34.60	See G-1
B	Switchyard	Various	Industrial	33.00	See G-1
C	Storage	Various	Residential Industrial	193.12	See G-1
D	Storage POW Camp	Various	Residential Industrial	1131.50	See G-1
E	Storage	Various	Residential	270.60	See G-1
Total Acres : 1662.84					

(4) The current owners of the property are listed in Appendix G-1 by parcel number and owner name. This lengthy list was originally compiled during a Preliminary Assessment.

b. Climatic Data

(1) Material in paragraphs 3b.(2) through (4) was extracted from the Climatology Report for the State of California, dated May 1980 (reference B-17).

(2) The portion of San Bernardino County where the site is located is subject to extremes in weather due to mountainous barriers to the north and northeast which take large amounts of moisture out of Pacific low pressure systems.

(3) The annual precipitation averages 14.05 inches. The wettest months are usually January and February. The months with the least amounts of precipitation are July and August. Flooding is a problem when large amounts of precipitation fall in a short period of time.

(4) The average temperature ranges from daily minimums in January and December of 46 to 56 degrees F. to daily high temperatures of 83 to 85 degrees F. in July and August. The lowest temperature observed was 28 degrees F. in January, and the highest temperature was 110 degrees F. in September. Mean number of days with temperatures over 90 degrees F. is 20.

(5) The average snowfall each winter is 0.3" with occasional hail and sleet which is measured as regular precipitation. The relative humidity averages from 53 to 75 percent through the course of the day.

(6) The prevailing winds are from the west except in the months of January and December, when the winds shift to the northeast. The mean speed is 6.2 m.p.h. with extremes noted as high as 49 m.p.h.

(7) Mean percentage of sky cover is 4 percent and on average, percentage of possible sunshine is 73 percent. Fog is a visibility problem, on average, 17 days per year.

c. Topography

The topography varies from generally level to gently rolling with surface elevations from 1303 feet on the western border to 1499 on the northeast side of the site. Slopes are from 30 to 50 feet per mile (see reference B-2)

d. Geology and Soils

(1) Material in paragraphs d.(2) and d.(3) was extracted from the Soil Survey of San Bernardino County, California (reference B-2).

(2) Regional Geology/Soils

The area is located on the floor of the San Bernardino Valley, a semi-arid inland valley of the Pacific coast Peninsula Ranges Physiographic Province. This province is characterized by narrow folded and faulted mountain ranges separated by longitudinal alluvial valleys trending northwest-southeast. The San Bernardino Valley was created by the coalescing of alluvial fans which extend from the base of the mountains to form a broad, gently sloping alluvial plain. The valley is bordered on the northeast by the San Bernardino mountains, on the south by the Badlands and Crafton Hills, and to the southwest by a low escarpment of the San Jacinto Fault. The site is underlain by more than 1000 feet of Pleistocene and Recent Age alluvium composed of granitic and gneissic detritus (see reference B-5).

(3) Site Specific Geology/Soils

The former San Bernardino Engineer Depot has two soil series on the site. These series are described as follows:

(a) The Tujunga series is the predominant series on the site and consists of somewhat excessively drained, nearly level to moderately sloping soils that formed on alluvial fans in granitic alluvium. The soil, in a representative profile, is brown loamy sand and pale coarse sand that extends to a depth of 60 inches or more. The soil is rapidly permeable. Roots can penetrate the soil to a depth of 60 inches or more. The soils are especially good for the cultivation of citrus, grapes, small grains and potatoes. The 2 subtypes found on the site, TvC and TuB are further characterized as follows:

[1] Tujunga gravelly loamy sand (TvC): Similar to the representative of the series with a content of fine gravel about 15-30 percent. Runoff is very slow to slow. Available water capacity is 3 to 4 inches. The hazard of erosion is slight due to the gravelly surface layer.

[2] Tujunga loamy sand (TuB): This is soil described as the representative of the series. Runoff is slow to very slow. the hazard of water erosion is slight but the soil will blow if left unprotected. The hazard of soil blowing is moderate to high on bare soil. Available water capacity is 4 to 5 inches.

(b) The Friant Series consists of somewhat excessively drained, steep soils. These soils formed on uplands in material weathered from mica schist. Slopes are 30 to 50 percent. In a representative profile, the soil surface layer is dark brown and slightly acid and brown and neutral fine sandy loam. These soils are moderately rapidly permeable. The available water capacity is 1 to 2 inches. Roots can penetrate to a depth of 10 to 18 inches. The soil is useful for spring grazing of livestock and watershed.

(c) Friant Rock outcrop complex (Fr): This steep complex occupies foothills in the uplands. It is about 55 percent Friant sandy loam, and 30 percent rock outcrop. Friant soils and rock outcrop occur at random throughout the area of the survey and 5 times on the area of the site inspection. Runoff is rapid and the hazard of erosion is moderate if undisturbed. In areas where the land is bare due to fire or overgrazing, the hazard of erosion is high.

e. Hydrology

The site is located in the center of the 110 square mile Bunker Hill groundwater basin. The basin is recharged largely by runoff from the San Bernardino Mountains. Recharge also occurs by groundwater flow from the San Timoteo Basin to the southeast and by the infiltration of surface water. Hydraulic conductivities of the upper sands average 2×10^{-2} ft/ft. The local groundwater flow direction is from northeast to southwest under a gradient of about 5×10^{-3} ft/ft. Depth to the water table is currently 85-95 feet below ground surface. Open water on the site is in the form of 2 concrete lined drainage structures that eventually empty into Cajon Wash south of the site. One of the structures handles the runoff from Cable Creek and is so named; the second is not named and handles the runoff from Devil Canyon. Cajon Wash empties into the Santa Ana River Basin, a 532 square mile area that eventually drains into the Pacific Ocean.

f. Natural Resources

(1) There are several different animals and plants listed as threatened, endangered or as proposed species to be protected in this portion of San Bernardino County by the Fish and Game Service(see reference B-16).

(2) The species listed in references B-16 are presented in tabular form in Table 3-2:

**TABLE 3-2
NATURAL RESOURCES**

Resource Classification	Type	Comment
Mammal	Kangaroo rat	E
	Los Angeles pocket mouse	T
Bird	Peregrine falcon	E
	Least Bell's vireo	E
	California gnatcatcher	E
	SW Willow flycatcher	E
Amphibian/Reptile	Southwestern arroyo toad	E
	San Diego horned lizard	T
Fish	Unarmored three-spine stickleback	E
Plant	Slender horned spineflower	E
	Orcutt grass	E
	San Diego button celery	E
	Gambel's watercress	E
	Marsh sandwort	E
	Pringle's monardella	T
Crustaceans	Riverside fairy shrimp	E
	Vernal pool fairy shrimp	E
Insect	Delhi Sands flower-loving fly	E
E = Endangered		
T = Threatened		

g. Historical/Cultural Resources

There are no archeological or paleontological sites located within the boundaries of the former San Bernardino Engineer Depot (references appendix A, State Historic Preservation Officer).

4. HISTORICAL ORDNANCE PRESENCE

a. **Chronological Site Summary**

(1) The site was selected for the establishment of an Army Engineer Supply Depot in February 1942 and was known as the Engineer section, Advance Communication Zone Depot. The name was changed to San Bernardino Sub-Depot in May 1942. The site was then called the Engineer Supply Depot, San Bernardino in December 1942. The first designation of the site as the San Bernardino Engineer Depot was in February 1943 (see document L-1).

(2) Facilities built on site included troop barracks, mess halls, administration buildings, an infirmary and 64 warehouses. The site was also home to a barracks area used by 4 Italian Service Units made up of 499 paroled Italian Prisoners of War (POW) (see document F-4).

(3) The mission of the depot according to the official history and other historical documents was to provide support to the Los Angeles Port of Embarkation in the filling of requisitions for non-ordnance items of supply used by the Corps of Engineers such as tents, shovels, construction materials and barbed wire. Additional missions assigned to the depot included the storage and issue of oil drilling equipment, storage of heavy construction equipment, and the modification and preparation for overseas shipment of tractors for hauling artillery pieces. The only classes of supply stored at the depot were Class II (General Engineer Supplies) and IV (Petroleum Products). No provision was made for the storage of Class V (Ammunition). Additional missions included repairs to mechanical equipment and tent manufacture and repair (see document E-6).

(4) After the capitulation of Italy in September 1943, Italian prisoners of war were allowed to swear allegiance to the new Italian government and pledge non-aggression against the United States. These prisoners were paroled and organized into Italian Service Units (ISUs) which were used to repair and refurbish tents, stoves, vehicles and other non-perishable items of supply. They were housed on the depot itself but were not guarded though the enclave was referred to as the "Prisoner of War" Camp. The ISUs were disbanded in November 1945 and the prisoners repatriated to Italy (see document E-6).

(5) After serving as a turn in point for excess supplies returned from the Pacific Theater of Operations, the Depot was declared excess and deactivated in on 30 June 1947. All leases were terminated and the properties were returned to the original owners (see document E-6).

b. Ordnance Related Records Review

(1) Sources that were checked in the search for any OEW contamination included:

- [1] National Archives
- [2] Regional Archives
- [3] The Military History Institute
- [4] US Army Center for Military History
- [5] Emergency Ordnance Disposal Units (EOD)
- [6] Local Police Department
- [7] Local Sheriff's Department
- [8] County Court House

(2) For a complete list of sources checked, see Appendix A, Reference Sources.

(3) The documentation discovered in the course of the Archives Search showed that the San Bernardino Engineer Depot did support the Los Angeles Port of Embarkation (LAPE) in a supply capacity. The classes of supply handled by the depot were limited to Class II and IV, Engineer supplies and subsistence products for the Desert Training Center and interned Japanese-American civilians at Camp Manzanar (DERP-FUDS site no. J09CA0137). Class V (Ammunition) for the LAPE was handled 3 miles southwest of the site at the Rialto Backup Storage Point, DERP-FUDS site number J09CA0572 (see document L-1).

(4) The San Bernardino County Bomb Squad had no records of any incidents involving OEW in the area of the former San Bernardino Engineer Depot (see document I-1).

(5) A phone conversation with the staff duty NCO at the 259th EOD detachment at Fort Irwin, California elicited the information that the unit had not responded to any reports of OEW in the past 2 years in the area of the former San Bernardino Engineer Depot, the length of time that the unit now maintains historical records (see document I-5).

(6) Review of newspaper clipping files and the vertical files at the California Room of the San Bernardino Central Library did not reveal any evidence of the storage, issue or transit of ammunition and explosives through the former San Bernardino Engineer Depot.

c. Interviews with Site Related Personnel.

(1) In an attempt to verify that the Army did in fact use San Bernardino Engineer Depot for the storage, transit and issue of ammunition and explosives, interviews were conducted with individuals who had knowledge of the area. No former employees or assigned personnel were discovered in the course of the Archives Search.

(2) Interview with: Sgt. David Hall is assigned to respond to bomb scares, suspicious packages, and the discovery of ordnance items in addition to his regular patrol duties with the San Bernardino County Sheriff's Department. Sgt. Hale told me that he occasionally responded to people who had removed "souvenirs" like practice bombs from other areas of the desert or mountains, but never from the area of the former San Bernardino Engineer Depot. Sgt. Hall has been employed by the Sheriff's Office for 15 years and is a life long resident of the area.

(3) Interview with: Ms. Asendorf is a docent with the San Bernardino Historical Society. She stated that the Society is primarily concerned with events that occurred 100 years or more ago according to the organization's charter. The latest material currently archived and available for review would be 1894. She stated that review of unarchived material from post 1895 to the present was not possible at this time. She had no knowledge of any reports of OEW in the area of the former San Bernardino Engineer Depot, but did state that since the time frame in question would not be in the purview of the Society until 2042, she could be of no assistance.

(4) Interview with: Ms. Chris Shovey is the reference librarian for the California Room at the Central library in San Bernardino and a noted local historian. As well as being a lifelong resident of the San Bernardino area she has been with the library for 16 years. She provided us with information concerning the former POW camp and a reunion of the prisoners who remained in this country after World War II. She provided us the opportunity to review an extensive clipping file that focused on the affairs of the various military establishments in the area, both past and present. None of the articles had any mention of OEW in the former depot area or in the areas bordering upon it.

(5) Interview with: Susan, No Last Name Released, a librarian at the Los Angeles Maritime Museum. The team was searching for information concerning the role of the former San Bernadino Engineer Depot in the support of the Los Angeles Port of Embarkation (LAPE) during World War II. No information was discovered during review of the various exhibits in the museum. During a followup telephone call to the library, which had been closed on the day of our visit, the librarian could provide no information on the San Bernardino Engineer Depot and it's support role to the Los Angeles POE.

(6) Interview with: SSG Jones, 259th EOD Detachment, Fort Irwin, CA. SSG was interviewed telephonically and reported that his office had not responded to any calls in the area of the former San Bernardino Engineer Depot in the period covering the last two years for which they maintained records.

5. SITE ELIGIBILITY

a. **Confirmed Formerly Used Defense Site**

(1) Former land usage by the Army was previously confirmed for the entire 1662.82 acre site as summarized in section 4 of this report. The site remained an active Engineer Supply Depot until 30 June 1947 (see document F-6).

(2) There are no recapture or restricted use documents on record for San Bernardino Engineer Depot.

b. **Potential Formerly Used Defense Site**

No previously unknown potential formerly used defense sites were discovered by the site inspectors.

6. VISUAL SITE INSPECTION

a. **General Procedures and Safety**

(1) During the period 24-27 January 1995, members of the Site Inspection (SI) team traveled to the former San Bernardino Engineer Depot. The primary task of the SI team was to assess OEW presence and potential due to the Engineer Supply Depot that had been built on the site during the Second World War to support the LAPE.

(2) A site safety plan was developed and used by the SI team to assure an injury-free site inspection of San Bernardino Engineer Depot. A briefing was conducted prior to the SI which stressed that OEW should only be handled by military EOD personnel. Site safety was maintained by the inspection team at all times during the on-site inspection (see reference B-5).

(3) Prior to the site visit, a thorough review was made of available reports, historical documents, texts, and technical ordnance reference materials gathered during the ASR historical records search. This review was made to ensure team awareness of potential ordnance types and hazards.

(4) The actual inspection of the former San Bernardino Engineer Depot began on 25 January 1995, when the SI team visited the area of the site.

(5) The site is roughly triangular in shape and encompasses 5 tracts of land which were acquired by lease and are designated in this report as Areas A - E.

(6) The site is generally bounded on the north-northeast by Kendall Drive. It is generally bounded by Cajon Boulevard on the south-southwest side. The north-northwest boundary of the site is located at the intersection of Kendall Drive and Cajon Boulevard, which creates a corner of the rough triangle. The southeast border of the site is State College Parkway. A four wheel drive vehicle is not required to negotiate these roads. (see plate 2).

b. Area A: General Storage Area

(1) No Army built structures remain on this portion of the site. The perimeter was surveyed from the team rental vehicle and canvassed on foot by the site inspection team (see photograph J-3).

(2) No evidence of OEW was noted at this location.

c. Area B: Rail Switchyard

(1) No Army built structures remain on this portion of the site. The perimeter was surveyed from the team rental vehicle and canvassed on foot by the site inspection team (see photograph J-4).

(2) No evidence of OEW was noted at this location.

d. Area C: General Storage Area

(1) No Army built structures remain on this portion of the site. The perimeter was surveyed from the team rental vehicle and canvassed on foot by the site inspection team (see photographs J-1&2).

(2) No evidence of OEW was noted at this location.

e. Area D: POW Camp And General Storage Area

(1) No structures remain on this portion of the site. The perimeter was surveyed from the team rental vehicle and canvassed on foot by the site inspection team (see photograph J-7&5).

(2) No evidence of OEW was noted at this location.

f. Area E: General Storage Area

(1) No structures remain on this portion of the site. The perimeter was surveyed from the team rental vehicle and canvassed on foot by the site inspection team (see photograph J-8).

(2) No evidence of OEW was noted at this location.

7. EVALUATION OF ORDNANCE HAZARDS

a. General Procedures

(1) The site was evaluated to determine confirmed, potential, or uncontaminated ordnance presence. Confirmed ordnance contamination is based on verifiable historical evidence or direct witness of ordnance items. Verifiable historical records evidence consists of ordnance items located on site and documented by the local bomb squad, Army Explosive Ordnance Demolition team, newspaper articles, correspondence, current findings, etc. Direct witness of ordnance items consists of the inspection team directly locating ordnance items by visual inspection. Additional field data is not needed to identify a confirmed subsite.

(2) Potential ordnance contamination is based on a lack of confirmed ordnance. Potential ordnance contamination is inferred from records or indirect witness. Inference from historical records would include common practice in production, storage, usage, or disposal, at that time, which could have allowed present day ordnance contamination. Potential ordnance contamination could also be based on indirect witness or from present day site features. Additional field data is needed to confirm potential ordnance subsites.

(3) Uncontaminated ordnance subsites are based on a lack of confirmed or potential ordnance evidence. Historical records evidence and present day site inspections do not indicate confirmed or potential ordnance contamination. There is no reasonable evidence, either direct or inferred, to suggest present day ordnance contamination. Additional field data is not needed to assess uncontaminated ordnance subsites.

b. Area A: General Storage Area

Based on the site visual inspection, review of historical documents, and absence of any reports of found ordnance since the end of government use, this area is considered **uncontaminated** in accordance with the standards of paragraph 7.a(3).

c. Area B: Rail Switchyard

Based on the site visual inspection, review of historical documents, and absence of any reports of found ordnance since the end of government use, this area is considered **uncontaminated** in accordance with the standards of paragraph 7.a(3).

d. Area C: General Storage Area

Based on the site visual inspection, review of historical documents, and absence of any reports of found ordnance since the end of government use, this area is considered **uncontaminated** in accordance with the standards of paragraph 7.a(3).

e. Area D: POW Camp and General Storage Area

Based on the site visual inspection, review of historical documents, and absence of any reports of found ordnance since the end of government use, this area is considered **uncontaminated** in accordance with the standards of paragraph 7.a(3).

f. Area E: General Storage Area

Based on the site visual inspection, review of historical documents, and absence of any reports of found ordnance since the end of government use, this area is considered **uncontaminated** in accordance with the standards of paragraph 7.a(3).

8. SITE ORDNANCE TECHNICAL DATA

a. End Item Technical Data

(1) There is no evidence historical or current to indicate that ordnance was used, stored, transported through or manufactured at this site during the time period it was leased by the the government during the Second World War.

(2) Table 8-1, normally a listing of OEW items used at DERP-FUDS projects is therefore not being used in this report.

b. Chemical Data of Ordnance Fillers

Table 8-2 is used to provide information on the explosive/chemical compounds used in ordnance items found at DERP-FUDS sites. It has been omitted for this site because there is no evidence of OEW having been used, stored, transited through or manufactured on this site.

9. OTHER ENVIRONMENTAL HAZARDS

a. **Hazardous, Toxic, and Radiological Waste**

A PRP/HRTW project is proposed under the auspices of DERP-FUDS Project No. J09CA058401 (see document E-4). There were no other potential HTRW considerations noted at this site.

b. **Building Demolition/Debris Removal**

During the site visit and examination of aerial photographgraphs, no potential BD/DR projects were noted for consideration. All buildings built by the Army have been removed from the site in the period since the government relinquished the property leases in 1947.

**DEFENSE ENVIRONMENTAL RESTORATION PROGRAM
FORMERLY USED DEFENSE SITE
FINDINGS AND DETERMINATION OF ELIGIBILITY
SAN BERNARDINO ENGINEERING DEPOT
SAN BERNARDINO CALIFORNIA
SITE NO. J09CA058400**

FINDINGS OF FACT

1. The San Bernardino Engineering Depot including Camp Ono consisted of a total of 1662.82 acres and was leased by the U.S. Army on 1 July 1940 from the four owners listed below:

- a. Muscoy Water Company, 1390.72 acres through Lease number W868-eng-1503.
- b. Farm Homes Corporation, 270.6 acres through Lease number W3460-eng-3842.
- c. Atchison Topeka and Santa Fe Railway Company, 1.32 acres through Lease number W04-193-eng-2135.
- d. Edward B. Meyer, 0.18 acres through Lease number W04-139-eng-5861.

2. The San Bernardino Engineering Depot was used as military storage and repair depot, dry cleaning facility, tent manufacturing facility, locomotive vehicle maintenance ammunition storage and filler mission for Los Angeles Port of Embarkation. Camp Ono, part of the Engineering Depot was used as a prisoner of war camp. Site improvements included approximately 23 buildings including army barracks, mess halls, motor pool, vehicle repair buildings, tent repair and dyeing building, storage buildings, ammunition storage bunkers, dry cleaning building and 61,577 linear feet of rail road track.

3. The U.S Army terminated the leases on the site in various parcels and at different times as follows:

- a. Lease for Muscoy Water Company were terminated between 14 April 1945 and 15 January 1948.
- b. Lease for Farm Homes Corporation was terminated on 11 April 1946.
- c. Lease for Atchison Topeka Santa Fe Railway Company was terminated on 20 December 1946.
- d. Lease for Edward B. Meyer was terminated on 9 September 1946.

The above listed properties were returned to the original owners on the dates indicated above. The present owners include industrial commercial and residential developers and private land owners. There are industrial buildings shopping centers, multi-family apartment buildings, and single family residences currently occupying the site.

DETERMINATION

Based on the foregoing Findings of Fact the site has been determined to be formerly used by the Department of Defense. It is therefore eligible for the Defense Environmental Restoration Program - Formerly Used Defense Sites, established under 10 USC 2701, et seq.

DATE

9 Nov 93

MILTON HUNTER

Brigadier General, U.S. Army
Commanding

**SITE SURVEY SUMMARY SHEET
FOR
DERP-FUDS SITE NO. J09CA058400
SAN BERNARDINO ENGINEERING DEPOT
SAN BERNARDINO, CALIFORNIA
12 JULY 1993**

SITE NAME: SAN BERNARDINO ENGINEERING DEPOT, also known as Camp Ono

LOCATION: The former San Bernardino Engineering Depot consisted of 1662.82 acres and is located 4 miles northwest of San Bernardino bounded by Kendall Drive, Cajon Boulevard, and Little League Avenue with the Interstate Freeway running through the center of the property parallel with Cajon Boulevard. A second separate parcel of land is bound by 3rd Avenue on the north, First Avenue on the south, Gary Street on the west, and Nolan Street on the east. A third separate parcel of land is located between the Southern Pacific Railway on the east, Cajon Boulevard on the west, Institution Road on the north, and running approximately one mile to the southern boundary. A fourth parcel of land occupies an area a quarter of a mile north of Little League Drive and up to Yucca Avenue between the Union Pacific Railroad and Cajon Boulevard. A fifth parcel lies a quarter of a mile north of the fourth parcel and is bounded by Cajon Boulevard on the east, the Union Pacific Railroad on the south where the railroad and road cross each other. Camp Ono occupied approximately 300 acres within the Depot. The POW Camp Ono site was located between Cajon Boulevard and Kendall Drive and was considered part of the San Bernardino Engineering Depot. See site map attached.

SITE HISTORY: The San Bernardino Engineering Depot was used by the U.S. Army as a vehicle and ammunition supply and storage depot, dry cleaning facility, sewage spreading area, tent manufacturing and dyeing facility, locomotive maintenance facility, railcar and war tank degreasing facility, motor vehicle pool, prisoner of war camp, bomb manufacturing, and water softening facility. The site was also a part of the Advance Communications Zone Depot in the Southern California defence system. The U.S. Army used solvents in the railcar and tank degreasing operation. The grease and solvents were dumped into open pits thereby contaminating the soil and possibly the groundwater. The Cajon Landfill was not located within the former site boundary. There is no information available that would indicate that the DOD dumped waste in the landfill. The Culligan Corporation a water purification company occupied a portion of the site during the war, and maintains a water warehousing facility only at the present time. A prisoner of war camp known as Camp Ono occupied 300 acres of the site. On 28 January a total of 499 Italian prisoners of war were incarcerated in Camp Ono. The prisoners were used to maintain army vehicles, degrease army tanks, and operated a tent repair and tent dyeing facility. The activities performed by the depot was responsible for the contamination not necessarily Camp Ono. A soil gas survey was conducted in 1989 by WM Dennis Merklin who was the water resource control engineer of the ground water investigation section of the California Regional Water Quality Control Board Santa Ana Region. Trichloroethene (TCE) and tetrachloroethene (PCE) were detected from trace to quantifiable concentrations in eight public water supply wells in the Delman Heights area of San Bernardino in 1980. The Muscoy (San Bernardino Engineering Depot) area is located up-gradient of these wells; therefore, it is considered a potential source of the contamination found in these wells. Under the authority of the Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA), and the Superfund Amendments and Reauthorization Act of 1986 (SARA), the U.S. Environmental Protection Agency (EPA), tasked

Ecology and Environment, Inc.'s Field Investigation Team (FIT) to conduct a Screening Site Inspection of the San Bernardino Engineering Depot. FIT did not confirm the presence of PCE in soil on the site; therefore, it is inconclusive whether the San Bernardino Engineering Depot (Camp Ono) contributed to the regional groundwater contamination. The current owners include industrial commercial and residential developers and private land owners. There are industrial buildings shopping centers, multi-family apartment buildings, and single family residences, occupying the site including some open land.

SITE VISIT: A site visit was conducted on 26 February 1992 by Mr. Viroj Isaradharm, P.E. and Mr. Dennis L. Stouse, P.E. of MESA Engineering, Inc., Monterey Park, California. A map of the site was obtained from the Corps of Engineers Real Estate Division.

CATEGORY OF HAZARD: PRP/HTRW and OEW

PROJECT DESCRIPTION:

- a. PRP/HTRW: Recommend CESPCK pursue further investigation at this site to determine the appropriate level of PRP involvement.
- b. OEW: Recommend the MCX for OEW at Huntsville Division make a determination regarding further investigation at this site.

AVAILABLE STUDIES AND REPORTS: Information used to write this report were obtained from the following sources:

- a. A real estate file at the U.S. Army Corps of Engineers, Los Angeles District, Real Estate Division. Contact Christine Candlan at (213) 894-2695.
- b. Historical collection of newspaper items and reports from the San Bernardino County Library, California Room.
- c. The CERCLA Screening Site Inspection Report prepared by Ecology and Environment, Inc.
- d. Soil Gas Survey Report prepared by the Regional Water Quality Control Board.

DISTRICT POC: Jatin Desai, Los Angeles District, (213) 894-6266

**PROJECT SUMMARY SHEET
FOR
-- DERP-FUDS OEW PROJECT NO. J09CA058402
SAN BERNARDINO ENGINEERING DEPOT
SITE NO. J09CA058400
12 JULY 1993**

PROJECT DESCRIPTION: Documented historical data from old and recent newspaper reports indicates that ordnance was stored on the site during World War II.

PROJECT ELIGIBILITY: The site was formerly owned (used) by DOD (Army). Any ordnance found would clearly be the result of past DOD activity.

POLICY CONSIDERATIONS: None

PROPOSED PROJECT: Recommend the Corps' Mandatory Center of Expertise (MCX) for OEW at the Huntsville Division make a determination if further action is appropriate.

RAC FORM: Attached.

DISTRICT POC: Request CEHND inform Mr. Jatin Desai at (213) 894 6266 when a determination is made regarding project status.

**PROJECT SUMMARY SHEET
FOR
DERP FUDS PRP/HTRW SITE NO. J09CA058401
SAN BERNARDINO ENGINEERING DEPOT
SITE NO. J09CA058400
12 JULY 1993**

PROJECT DESCRIPTION: In 1980, a California State department of Health Services testing program discovered unacceptable concentrations of two common solvents (TCE and PCE) in several drinking water wells in North San Bernardino. These solvents possibly contaminated the soil and the underground water (aquifer) which might be spread out in a plume now known as the Camp Ono Plume. The contamination spread in the aquifer under most of the San Bernardino Engineering Depot area. The real source of contamination to the underground water has not been identified. A soil gas investigation was made by Ecology and Environment, Inc. in 1991 to determine the presence of trichloroethene and tetrachloroethene. The tests showed levels below the quantitation limit.

PROJECT ELIGIBILITY: The site was formerly owned and used by DOD (Army). Any contamination found would clearly be the result of past DOD activity.

POLICY CONSIDERATIONS: None

PROPOSED PROJECT: Recommend CESPCK investigate potential DOD contribution to the contamination at the site.

DD FORM 1391: Attached

EPA FORM: 2070-12: Attached

DISTRICT POC: Request CESPCK inform Mr. Jatin Desai at (213) 894-6266 when a determination is made regarding project status.

IV. COMMENTS			
The Camp Ono Plume (underground water) was contaminated possible from toxic solvents spillage at Camp Ono POW and San Bernardino Engineering Depot. Source of contamination has not been able to identified yet. Water well tests had confirmed the toxic contamination.			
V. SOURCES OF INFORMATION			
The "California Room" in the San Bernardino Control Library contained reports and newspaper clippings regarding the underground water contamination.

3. APPARENT PROBLEM

Several municipal groundwater wells located downgradient of the Camp Ono site are contaminated with tetrachloroethene (PCE) and trichloroethene (TCE) at levels exceeding the federal Maximum Contaminant Levels (MCLs) for drinking water. In 1986 an investigation of the sources of TCE and PCE contamination in the Bunker Hill Groundwater Basin was conducted for the California Regional Water Quality Control Board, Santa Ana Region (RWQCB). The consultants identified Camp Ono as a potential contributor to the regional groundwater contaminant plume (6).

As part of the 1986 investigation, 100 soil gas samples were collected from a 15-square-mile area in North San Bernardino. The Shandin Hills, which form a portion of the eastern boundary of the Camp Ono site, act as a barrier to groundwater movement and effectively divide the study area into two separate contaminant plumes located northeast and southwest of the hills. The investigation concluded that numerous sources, including Camp Ono, appear to have contributed to the groundwater contamination on the southwest side of the Shandin Hills. Camp Ono was identified as a potential major contributor due to the detection of PCE in soil gas at a relatively high level (40 micrograms per liter [$\mu\text{g/L}$]) and also because of its location relative to the contaminated municipal wells (6).

Howard Fribush, EPA Headquarters, Analytical Operations Branch

The analytical data for the Camp Ono site has been reviewed. Reportable data were generated on the following dates: May 31, June 1, 3, 4, 5, and 6. The analytical system was initially calibrated on May 12.

A data package was prepared every day samples were analyzed. The package consists of the following seven forms: Form 1 summarizes the sample results, Form 2 summarizes the internal standard recoveries, Form 3 summarizes the matrix spike results, Form 4 summarizes holding times, Form 5 is used to determine whether the elution time of a peak agrees with the theoretical elution time of a target analyte based on shifts in the elution time of the internal standard, Form 6 summarizes the initial calibration results, and Form 7 summarizes the continuing calibration results.

Peak splitting occurred in a number of samples. Although the cause of the splitting is not known with certainty, it appears likely that the presence of water on the sample collection tubes may be responsible. It was noted that peak splitting occurred in several samples with visible condensation on the outside of the collection tubes. Generally the splitting did not appear to limit the ability to identify and quantify the peaks. In determining the concentration of the target analytes, the areas of the split peaks were added together. In determining the internal standard recovery, the areas of the split internal standard peaks were also added together.

Blank spike and blank spike duplicates were analyzed instead of the matrix spike and matrix spike duplicates which the method called for. A blank tube is a tube previously analyzed with no target analytes found above the detection limit.

Two significant unidentified peaks were present in many of the chromatograms. These peaks did not represent target compounds. One of the peaks is possibly chloroform.

<u>Retention time</u>	<u>Detector</u>	<u>Speculative Identity</u>
4.8	HECD	Chloroform
10.8	PID	Unknown, possibly an aromatic hydrocarbon (ethylbenzene, xylene)

Most of the data were produced in strict accordance with the "FASP Method for Volatile Organic Compounds in Soil Gas, March 1991". A copy of this method is included at the end of this report. Deviations from the method and anomalies are listed below:

1. Peaks were identified as tetrachloroethene in several samples in which the observed and theoretical retention times differed by more than the stated criteria of 1.5%. In all cases, a peak with the same retention time was observed on both detectors.
2. Because the detection limit and the linear range of the PID detector were not accurately determined, the P qualifier was changed to flag compounds which are detected on both detectors when there is greater than 50% difference for the concentrations between the two detectors. The method called for 25%.
3. Many non-target compounds were detected on the PID detector. It is unknown how this may have affected the confirmation ability of the PID detector.
4. The percent relative standard deviation of the relative response factors of tetrachloroethene in the initial calibration exceeded the stated criteria of 25%. Consequently, samples with tetrachloroethene detected near the lower calibration range may be biased slightly high, whereas samples with tetrachloroethene detected in the mid to upper calibration range may be biased slightly low.

Sample results were flagged with FASP data qualifiers when necessary. Explanations of the qualifiers are given below:

- F Data has been generated using FASP methodologies and quality assurance measures. Compounds are tentatively identified and reported concentrations are estimates.
- U The analysis was performed, but the analyte was not detected. The associated numerical value is the method quantitation limit.
- J This flag indicates the reported value is greater than the method detection limit but less than the quantitation limit.
- E This flag identifies compounds whose concentrations exceed the calibration range of the method for that specific analysis.
- P This flag is used for compounds which are detected on both detectors when there is greater than 50% difference in the concentrations between the two detectors.
- B This flag is used when the analyte is found in the associated method blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action.
- NA This flag indicates that reportable data was not generated for this compound for this analysis.

Specific comments regarding deviations from the method and/or unusual incidences are listed with each data package.

Table 6-1

	Dichlorodifluoromethane	ND	*	
	Tetrachloroethene	ND	5	
	Trichlorofluoromethane	ND	*	

The quantitation limit for all analytes was 1 µg/L.

The following is a summary of the most significant Hazard Ranking System considerations associated with this site:

- o Undetermined waste quantity;
- o Low potential for a documented release to groundwater, surface water, and air;
- o Groundwater within 4 miles of the site serves a 100,000 people;
- o Distance to the nearest well is located within 0.25 miles.

7. EMERGENCY RESPONSE CONSIDERATIONS

The National Contingency Plan [40 CFR 300.415(b)(2)] authorizes the Environmental Protection Agency to consider emergency response actions at those sites which pose an imminent threat to human health or the environment.

There is no apparent need for a referral to EPA's Emergency Response Section at this time because no evidence of on-site contamination exists. X

Chris Shovey
Librarian, California Room
Feldheym Library
555 West 6th St.
San Bernardino, CA 92410

Dear Ms. Shovey:

In doing further research related to Camp Ono, I finally happened across some original documents relating to the base. While they were much too voluminous to copy in their entirety, I did prepare a summary of the information they contained, and I thought you might want a copy of the summary I prepared. Feel free to include this in the "Camp Ono" file if you feel that it is of sufficient interest. Since it is drawn from the base historian's papers, I feel fairly confident that it is accurate. Note that it corrects several misstatements contained in the Draft Environmental Impact Report. My summary also provides information for anyone who wishes to do further research.

Thanks for your past help, and for the collection of records you and Arda maintain. If you have any questions, please call me at (415) 744-2377.

Very truly yours,

A handwritten signature in cursive script that reads "Clifford R. Davis".

Clifford R. Davis
Civil Investigator

A SHORT HISTORY OF CAMP ONO

Camp Ono is an unofficial, unrecognized name attached to a World War II supply depot which fulfilled several key functions during and immediately following World War II. Most military sources refer to the base by one of three terms: 1) the Base General Depot; 2) The Mira Loma Quartermaster Repair Sub-Depot, or 3) The San Bernardino Engineer Depot. The chronology which follows is abstracted from a collection of histories and studies mostly prepared by the Depot Historian, James W. Bennett. Bennett prepared several monographs which are now contained in Record Group 92, Boxes 7, 8, and 10, stored in the National Archives, Pacific Southwest Region, Laguna Niguel, CA. Bennett was actually stationed at the Mira Loma Quartermaster Depot in Mira Loma, California (near Ontario in San Bernardino County). A list of references used in preparing this brief chronology follows this history, and anyone seriously interested in the history of "Camp Ono" should call the National Archive at (714) 643-4241 for an appointment to view these records.

On January 9, 1942, Lt. Col. Charles E. Stafford arrived in San Bernardino and assumed command of the organization which became the Advance Communications Zone Depot, under the command and control of the Army Ninth Service Command, headquartered at Fort Douglas, Utah. The Depot was established on January 16, 1942, with administrative offices in the Andreson Bldg. at 3rd and E Streets in San Bernardino. Warehouses were leased in a variety of locations in San Bernardino, including the National Orange Show. Over the next month or two, a search was conducted to locate a suitable open space for creating a supply depot, with requirements including access to railroads and highways. The Ono siding was selected, with approximately 1,100 acres leased by the United States, primarily from the Muscoy Water Company. (A map showing the leased parcels is available in Record Group 77, Box 1, Records of the Corps of Engineers, in the National Archive in Laguna Niguel.) A contract to construct warehouses and buildings was awarded on February 11, and construction began February 12, 1942, according to the Depot Military Diary. The Corps of Engineers also claims credit for building many of the structures at the Depot. Soon after, in March, 1942, the Depot began storing supplies, both at the Ono siding and in warehouses around San Bernardino, including one reference to 80,000 gallons of oil, requiring 10 acres of open ground, and drums of lubricants, requiring 800 square feet of storage space, a task which seemed impossible to Stafford, but which was done.

On April 2, 1942, the Desert Training Center was established, headquartered at Camp Young in the Mojave Desert, with Major General George S. Patton, Jr. in command. For the next two to three years, one of the primary functions of the Ono Depot was to

A Short History of Camp Ono
November 16, 1993

supply the troops assigned to the Desert Training Center (DTC), which was later renamed the California-Arizona Maneuver Area (C-AMA). On April 15, 1942 the Ono Depot was detached from the Communications Zone and redesignated as a branch of the California Quartermaster Depot located in Oakland, CA. By May 1, 1942, the Administration building at Ono was completed and the Depot headquarters was moved to the Kendall Avenue address. The Bennett monographs report that the move was not accomplished without incident however. Apparently some strong Santa Ana winds shifted the building approximately 4 inches off its foundations, and a moderate earthquake also caused the building's roof to separate from the walls, requiring repair and additional bracing.

By July 1, 1942, the Depot was assigned responsibility for supplying "subsistence" (everything other than ordnance) to the DTC (which quickly grew to a maximum of some 200,000 troops), as well as rations for the Japanese civilians interned after the outbreak of hostilities, totalling between 40,000 and 60,000 people incarcerated at Camp Manzanar in the Owens Valley, California, Parker, Arizona, and other locations. On August 15, 1942, another change in the command structure occurred with the Ono Depot made a Sub-Depot of the Mira Loma Quartermaster Depot, a facility then under construction, and returned to the direct control of the 9th Service Command in Utah. By December, 1942, it was decided to make the Sub-Depot an "on the job" training experience for troops and commanders going overseas, in order to provide them with experience in setting up and running a supply depot overseas. Accordingly, the Sub-Depot was established as a Training Theater of Operations Depot, renamed the Base General Depot, and administrative and supply units were cycled through to gain actual experience in supplying front line troops. The BGD continued to supply all classes of commodities except ordnance, including quartermaster, signal corps, and engineer supplies until the C-AMA was closed in April 1944. At its busiest, the BGD was designed to accommodate 15,000 field troops, had a field hospital with 1,100 beds (cots?) at the northwest end of the camp, a laundry which peaked at laundering 40,000 items in an 8 hour shift, clothing repair shops, and 13,000+ feet of railroad track laid by the Corps of Engineers to supplement the AT & SF/Union Pacific tracks. An oversized map of the Depot, with buildings located and numbered, is included with the Corps of Engineers material on deposit at the Laguna Niguel Archive

On June 7, 1944, the BGD was deactivated and control of the Depot was split, with 380 acres assigned to the Quartermaster Corps and designated the Mira Loma Quartermaster Repair Sub-Depot. The Depot's primary mission was repairing clothing and equipment, particularly tents, canvas products, and webbing gear from a variety of sources, both overseas and from the disbanded C-AMA.

A Short History of Camp Ono
November 16, 1993

Repaired material was sent to Mira Loma, and from there went to troops overseas, either in Europe or the Pacific theater. The balance of the Depot was assigned to the Corps of Engineers, designated the San Bernardino Engineers Depot, and was used primarily for the storage of mobile drilling rigs and petroleum refineries, as well as receiving, repairing, and shipping of construction equipment. 1,360 tractors were also received, modified for military use, and shipped overseas.

A major portion of the tent repair mission was accomplished by former Italian POWs. After the fall of Italy, the government of Italy joined the Allied Forces against Germany, and Italian POWs were offered the option of swearing loyalty to the new Italian government and non-aggression against the United States. Most POWs elected to do so, and were then placed in special military units, called I.S.U.s or Italian Service Units. Four companies were assigned to the Repair Sub-Depot, and devoted most of their efforts to repairing and refurbishing material for reuse in the war effort, including tents, stoves, vehicles, and other non-perishable supplies. The ISUs at the Sub-Depot, once they were appropriately trained and given adequate facilities, proved to be invaluable, contributing numerous suggestions and improvements to the repair process, maintaining much of the Sub-Depot equipment, and providing almost all of the heavy manual labor required. Bennett's monographs deal in some length with the primitive conditions at the Sub-Depot, including the lack of paved roads, buildings without air conditioning, coolers, or even ventilation, lack of sanitary facilities, particularly for women, which made hiring and retention of civilian employees difficult. In addition, transportation to the base was often difficult, especially with gasoline rationing, and some commuters suffered damage to their vehicles from windblown sand. Moreover, with labor scarce, many workers preferred to work in better conditions in town, at higher paying jobs. The Depot was unable to match wages paid by non-military employers. All of these circumstances, which created a civilian labor shortage, made the work of the ISUs even more valuable.

By November, 1945, the ISUs had been disbanded and repatriated to Italy. The QMC declared the Sub-Depot surplus, having moved all operations to Mira Loma, and the base was completely occupied by the Engineers. On June 30, 1947, the San Bernardino Engineers Depot was deactivated, with virtually all surplus material at the Depot sold in one or another of the nine sales of surplus property, or shipped to another base for use or sale.

SUBJECT: Surplus - San Bernardino Engineer Depot, San Bernardino,
California

TO: Commanding General, Sixth Army
Chief of Engineers

1. Effective 30 June 1947, San Bernardino Engineer Depot, San Bernardino, California, will be placed in the category of surplus. It is therefore desired that action be initiated to dispose of this installation in accordance with applicable laws, directives, and regulations.
2. Additionally, it is desired that all appropriate agencies be notified of the last date for transmission of mail to this installation which does not concern action to be taken in connection with its closing.
3. Agencies concerned with the furnishing of supplies and equipment to this installation will cancel all back orders for such supplies and equipment, and will furnish only those required by the station to efficiently fulfill any action required in its orderly closing. The provisions of ASF Manual M 706, 30 April 1945, will apply.
4. Records pertaining to this installation and to non-T/O units and activities discontinued as a result of the action directed above will be disposed of in accordance with the provisions of TM 12-259, Records Administration - Disposition of Records, as amended.

BY ORDER OF THE SECRETARY OF WAR:

EDWARD F. WITSELL
Major General
The Adjutant General

HISTORY:

The quartermaster depot installations at San Bernardino, Calif. is designated the Mira Loma Quartermaster Sub-Depot, San Bernardino, Calif. - per WD Memo No. S30-3-42 dated September 12, 1942.

The installations of the Mira Loma Quartermaster Sub-Depot located at San Bernardino, Calif. are turned over to the CG, Desert Training Center and will be utilized as a communication zone general depot, and will be designated as the Base General Depot. To be organized and operated in the same manner as a combined port of debarkation and overseas communication zone base depot. - per AG 400 (1-12-43)OB-S-SPOPT-M dated January 14, 1943 (C).

The Base General Depot, San Bernardino, California, is being closed. - per ASF Circular #118 dated 28 April 1944. Pursuant to authority contained in 1st Ind., AGF, 320.2 (C-AMA)(3 April 44)GNSDS-1-B, 14 April 1944, the present allotment of personnel to the Base General Depot, Communications Zone, California-Arizona Maneuver Area, is withdrawn, effective 30 April 1944. - per AGF letter 320.2/29 (C-AMA)(R)(19 Apr 44)GNGCT dated 19 April 1944 (R).

The address of the Base General Depot is San Bernardino, Calif. and car load movements will be billed to Ono Siding, San Bernardino, Calif. - per letter, 461 (SPREG) dated 24 May 1944.

The Base General Depot, San Bernardino, Calif., is transferred to the control of the Chief of Engineers. This depot will operate as a subdepot of the San Bernardino Engineer Depot and is redesignated as the San Bernardino Engineer Subdepot. Carload movements consigned to this depot will be billed to Ono Siding, San Bernardino, Calif. - per ASF Circular #186 dated 20 June 1944.

The San Bernardino Engineer Subdepot, established as a sub installation of the San Bernardino Engineer Depot by section I, ASF Circular No. 186, 1944, is redesignated as the Ono-San Bernardino Engineer subdepot. The freight address and railhead of the Ono-San Bernardino Engineer Subdepot. Freight address: Ono Siding, San Bernardino, California. Railhead: Ono-Siding, San Bernardino, California. - per ASF Circular #225 dated 19 July 1944.

Effective 1 April 1946, the Ono-San Bernardino Engineer Sub-Depot, Ono, San Bernardino County, California, a subactivity of San Bernardino Engineer Depot, is redesignated as the San Bernardino Engineer Depot, a class IV installation under control of the Chief of Engineers. The mail address of the newly designated depot is: San Bernardino Engineer Depot, Post Office Box 1240, San Bernardino, California; less-than-carload and carload freight shipments for this depot will be billed.

BY COMMAND OF BRIGADIER GENERAL WHITE:

ROBERT S. HICKSON,
Captain, QMC,
Executive Assistant.

OFFICIAL:

ROBERT S. HICKSON,
Captain, QMC,
Executive Assistant.

REPORT
 BASE GENERAL DEPOT
 SAN BERNARDINO, CALIFORNIA

1 May 1944

SUBJECT: Sanitary Report for month of April 1944.

TO : Commanding Officer, Base General Depot, San Bernardino, Calif.

1. In compliance with the provisions of AR 40-275, as amended by C-1, dated 25 Jan 1943; Cir Itr No. 76, SGO 1942; and WD AGO Itr AG 430.2 (1-1-42) WO-D-M, 12 Jan 1942, Subject: "Improvement of the Nutrition of Troops", the following report is submitted for the period of 1 April 1944 to 30 April 1944.

2. Environmental Sanitation.

a. Permanent type of camp, pyramidal tents used for quarters. Sibly stoves have been removed from all tents. In part of Headquarters Company area floors are in the tents. Five men are quartered in each tent. Temperature range has been between 45 and 70 degrees. Nights have been cool.

b. Water Supply: Water is obtained from the San Bernardino Utilities Corporation. The source of the water is a well 412 feet deep. Chlorination of water is accomplished by an automatic chlorinator at the source. Examination of water by a laboratory shows that it is palatable, potable and chlorine content satisfactory.

c. Milk Supply: Fresh milk was issued by the Quartermaster. Laboratory check of the milk has shown that it meets the minimum standards.

d. Food Supply: "A" ration is being used. The ration has been adequate in quantity quality and in regard to nutrition in so far as can be determined in the field. The amount consumed by the individual soldier has been adequate. The "A" ration has contained more variation and the consumption of vegetables and fruit has been satisfactory. The cooks have been competent. Preparation of the food has varied. Foods have been served hot. The high winds with accompanying sand in the air makes serving difficult in temporary type mess halls. The close supervision of the preparation and serving of food keeps the waste at a minimum.

e. Insect Eradication:

(1) The start of warm weather has brought some return of flies. New memorandums have been issued on fly control. Inspection of areas and control of fly situation has received added attention. Latrines have been ciled; fly traps, fly paper and fly swatters are used to exterminate flies.

f. Waste Disposal:

- (1) General Order No. 18 of Base General Depot, dated 17 August 1943, outlines the procedures for disposal of edible garbage, grease, cans, boxes, crates and cartons.
- (2) All grease from kitchens and from grease traps is salvaged.
- (3) Sewage disposal for a few buildings is by flush toilet and by individual septic tanks. All other latrines, are the deep pit type maintained according to FM 8-40.

3. Personal Hygiene:

a. Monthly physical examinations were given as required by AR 615-250; 90% of the command was actually present. 10% absent because of furlough, absent sick or because of detached service. No new cases of gonorrhoea were found at the time of the monthly physical inspections.

b. At time of examination the general condition of the men was found to be good. No evidence of malnutrition. The men appeared well nourished and all show evidence of training.

c. The immunization program has been constant. Immunizations are completed and stimulating doses given as authorized.

4. There has been no undue prevalence of acute communicable diseases.

5. New or improved administrative measures or sanitary devices. The surface drainage of the depot has been improved by grading and the construction of new bridges and culverts.

6. Venereal Diseases.

a. New cases of venereal disease that occurred in the last month in organizations served by this dispensary, 5 cases colored, 5 cases white. None of the cases had taken any prophylaxis and no adequate reasons were given.

b. San Bernardino California furnished the highest percentage of sources of infection. The city and county health departments give excellent cooperation in tracing the sources of infection and follow up so that the sources are put under treatment.

c. Careful contact histories are taken on the infected cases and forwarded according to C-ANA directives.

d. Educational Measures:

- (1) Lectures on sex hygiene were given units as required in AR 40-250.
- (2) Posters were distributed for use in prominent places of the companies.
- (3) A prophylactic station is maintained at the dispensary on a 24 hour basis. A prophylactic station is maintained at 425 C. Court street, San Bernardino, California. This station operates on a 24 hours schedule with trained personnel. Chemical kits are available at the Post Exchange.

e. The Special Service Section provided recreation in the form of stage and movies shows. Supervised athletics are under direction of the Special Service Officer.

7. Subjects not covered by other headings. None.

8. Recommendations. None.

WAR DEPARTMENT
OFFICE OF THE CHIEF OF ENGINEERS
WASHINGTON

REFER TO FILE NO. ENGBU

17 April 1947.

MEMORANDUM FOR THE DIRECTOR OF SERVICE, SUPPLY AND PROCUREMENT, WDGS.

SUBJECT: Change in Status, San Bernardino Engineer Depot.

1. In accordance with procedures outlined in paragraph 3.a., War Department Circular No. 2, dated 2 January 1947, the San Bernardino Engineer Depot is herewith reported excess to the needs of this Service.

a. Information relative this installation follows in sequence outlined in above quoted circular:

(1) San Bernardino Engineer Depot, Ono Siding, on U. S. Highway 66, 6 miles north of San Bernardino, California. Inclosures 1 and 2, building numbers and real estate map and vicinity map, indicate location and identification of the property.

(2) The depot is on leased property and the working storage area consists of 320,000 sq. ft. gross warehouse space, 1,608,000 sq. ft. open hard-standing area and 7,406,000 sq. ft. open unsurfaced area. Inclosure 3, building and utilities records, lists structures, all of which were erected by the army. Buildings are both T/O and HOB type. T/O type buildings are in poor condition. HOB type buildings are in fair condition. Railroad trackage, 61,577 lineal ft., 65-110 pound rail, is in good condition. Pavements, high and low type, are in good condition. Inclosures 4, 5, 6 indicate railway, electrical distribution and water systems.

(3) The present mission of this depot is for the storage of War Department surpluses in the amount of 25,693 tons programmed by WAA for early sale. The depot formerly had a mission as a distribution depot supplying posts, camps and stations in Southern California, and a filler mission supporting the Los Angeles Fort of Embarkation. 874 tons of supplies required for these missions still remain at the San Bernardino Engineer Depot as of 31 March 1947 but evacuation of the 874 tons is expected by 15 May 1947.

(4) This depot is recommended for surplus status.

(5) Not applicable

(6) Use of any portion of this property by other army or federal agencies is not recommended unless it develops that the WAA will accept simultaneous transfer of both surplus personal and real property and thereupon will require use of the facility pending final disposition of surplus personal property.

(7) This installation is recommended to be placed in surplus status as of 30 June 1947.

(8) Contractual commitments are:

(a) Water contract with City of San Bernardino.

(b) Water contract with San Bernardino Water Utilities Corporation.

(c) Electricity contract with California Electric Power Company.

(9) Reservoir, chlorinator and reservoir site recommended to be disposed of when last portion of depot site is disposed of.

(10) As indicated in paragraphs (2) and (6), it is possible that surplus personal property will be stored within this installation as of 30 June 1947. It is understood that disposition of this property will thereupon become the responsibility of Headquarters, 6th Army or the WAA, depending on method of disposing.

(11) Not applicable.

Site of Quartermaster Depot Along Cajon Road North of S.B.

SAN BERNARDINO SUN

17 FEBRUARY 1942

Air Officer Assigned to Supply Base

Work began yesterday on the first of a series of army projects to be installed in San Bernardino county at an estimated cost of \$75,000,000.

Ultimately 10,000 civilian workers will be employed at the projects, scattered throughout the county.

Under contract to erect 23 structures in 45 days, H. A. Nicholson, of Los Angeles, moved crews to the site of the advance communications zone depot of the Southern California defense sector along Cajon boulevard north of Little mountain, where preliminary development will cost roughly \$150,000.

COL. BEAU ASSIGNED

At the same time, the assignment of Col. Lucas V. Beau Jr., formerly on the staff of the commanding general, First wing of the air corps, as commanding officer of the San Bernardino air supply depot was announced. Colonel Beau's assignment was announced by Sheffield J. Arnold, secretary-manager of the San Bernardino chamber of commerce, who was advised of the appointment.

Likewise, it became known that H. C. Thompson, of the U. S. army engineers, would immediately establish offices as the resident engineer assigned to the air corps depot.

Comprised of the temporary type structures, the communications zone depot will serve the army in the southland. It will occupy a site between the Cajon road and Kendall drive, into which rail transportation facilities will be extended to serve the warehouse and other structures to be erected under the contract awarded to Nicholson.

STAFF MEMBERS

Included in the development will be a series of buildings and administration offices for Lieut.-Col. C. E. Stafford, of the quartermaster corps, whose staff is now occupying temporary quarters in San Bernardino.

Already, more than 60 civilian workers, clerks and unskilled laborers have been employed.

Colonel Stafford's staff comprises Major Henry K. Elder, executive officer; First Lieut. Emory D. K. Jackson, adjutant; Major J. H. Dawson, medical administration corps; First Lieut. M. A. Borchert, M.A.C.; Major E. H. Frenzell, C. E.; First Lieut. Earl S. Groesbeck, C. E.; Capt. F. C. Westerhout, M. C. and Capt. Earl F. Armstrong, C. W. S.

No statement was issued from the temporary offices of Contractor Nicholson, but it was understood workers would be recruited in the San Bernardino district to supplement his crews.

31 DEC 1943

Orange Show Building Leased For Warehouse

1,200 Civilians Will Be Employed by Major Army Project

Designated by the Army as the main backup engineering supply center for the port of Los Angeles, the San Bernardino Engineer depot has acquired the National Orange Show building for general storage purposes.

This and the fact that the engineer depot would be expanded in 1944 to the extent that 1,200 civilians would eventually be employed, were announced yesterday by Major William P. Lee, commanding officer of the depot.

Major Lee indicated that the San Bernardino depot would become the major Army engineer corps supply center in Southern California. He said that the tonnage of supplies handled by the depot since last August already had increased 1,000 per cent.

ESTABLISH WAREHOUSES

In addition to the Orange Show building, the Engineer depot, headquarters for which are at 1120 E street, has established warehouses at 535 Base Line, 374 F street, 114 Stoddard street, 1132 Acacia street, at Fourth and F streets in San Bernardino, and at the old Mira Loma winery, south of Fontana.

Major Lee said that the Mira

MAJOR WILLIAM P. LEE

Loma building will be used as a storage center for special equipment. In addition, the depot shops will be located there.

The depot also has obtained a 40-acre site adjacent to the Mira Loma winery which will be used for storage of heavy equipment. This land was acquired through the cooperation of the Mira Loma Army quartermaster depot.

GENERAL VIEWS PROJECT

Approval of San Bernardino as a permanent location for the Engineer depot was given following an inspection of the district by Brig-Gen. Frank A. Helleman, from the headquarters of the Army engineer corps in Washington, and Col. Myron C. Gould, chief of the corps' Pacific supply division.

The principal reasons for establishing the Engineer depot in San Bernardino, Major Lee said, were the city's close proximity to the

Orange Show Building Leased For Warehouse

1,200 Civilians Will Be Employed by Major Army Project

(Continued from Page Nine)

port of Los Angeles and the fact that the city is a focal point of transcontinental railroads. The latter fact will facilitate the shipment of supplies.

In obtaining the Orange Show building, which formerly was occupied by units of the San Bernardino Army Air depot, as a storage center, Major Lee also announced that the Pacific Electric railway had agreed to install a spur track into the Orange Show grounds. This spur will extend from the Pacific Electric's San Bernardino-Colton line across E street, south of Mill street, and into the grounds.

SHIP TO WAR ZONE

Major Lee pointed out that with such facilities, it will be possible to ship equipment directly from the Orange Show storage center to the port of Los Angeles, from which it will then go into the Pacific war zone.

Major Lee also said that plans have been made for establishing additional depot workshops in San Bernardino, although details of these plans have not been completed.

Already the Engineer depot has in its employment 260 civilian workers and this number will be increased as the expansion program progresses.

At a recent meeting of the chamber of commerce, Major Lee appeared as speaker and informed the directors that it would be the policy of the depot to purchase engineers' supplies locally insofar as possible.

A former resident of Mt. Shasta, California, Major Lee is making his residence at 158 East Tenth street with his wife and two daughters.

NAME OF PERSON CONTACT WITH Sgt. Hall	ORGANIZATION San Bernardino County Sheriff's Department Bomb Squad	TELEPHONE NO. 909-387-8313
---	---	--------------------------------------

SUBJECT
San Bernardino Engineer Depot - Project Number J09CA058402

SUMMARY

Sgt. Hall is assigned to respond to bomb scares, suspicious packages, and the discovery of ordnance items in addition to his regular patrol duties. I explained the location of the site and the tenets of the DERP-FUDS program. Sgt. Hale told me that he occasionally responded to people who had removed "souvenirs" like practice bombs from other areas of the desert or mountains, but never from the area of the former San Bernardino Engineer Depot. Sgt. Hall has been employed by the Sheriff's Office for 15 years and is a life long resident of the area. I thanked him for his time and requested that he contact this office if he received any reports of ordnance in the area of the former Engineer Depot.

SUBJECT
San Bernardino Engineer Depot - Project Number J09CA058402

SUMMARY

Ms. Asendorf stated that the Society is primarily concerned with events that occurred 100 years or more ago according to the organization's charter. The latest material currently archived and available for review would be 1894. She stated that review of unarchived material from post 1895 to the present was not possible at this time. She had no knowledge of any reports of OEW in the area of the former San Bernardino Engineer Depot, but did state that since the time frame in question would not be in the purview of the Society until 2042 she could be of no assistance. I thanked her for her time and terminated the conversation after exchanging addresses and telephone numbers.

SUBJECT

San Bernardino Engineer Depot - Project Number J09CA058402

SUMMARY

Ms. Shovey is the reference librarian of the California Room at the Central library and a noted local historian. As well as being a lifelong resident of the San Bernardino area she has been with the library for 16 years. We explained the scope of the Derp-Fuds program and the way it impacted the area of the former San Bernardino Engineer Depot. She provided us with information concerning the former POW camp and a reunion of the prisoners who remained in this country after World War II. She provided us the opportunity to review an extensive clipping file that focused on the affairs of the various military establishments in the area, both past and present. None of the articles had any mention of OEW in the target area or in the areas bordering upon it. We exchanged addresses and telephone numbers and thanked her for time. She promised to notify us if she came across any additional information on the site.

NAME OF PERSON CONTACT WITH Susan Last Name Not Released	ORGANIZATION Los Angeles Maritime Museum Library	TELEPHONE NO. 213-548-7618	
SUBJECT San Bernardino Engineer Depot - Project Number J09CA058402			
SUMMARY			
<p>The team visited the Museum searching for information concerning the role of the San Bernadino Engineer Depot in the support of the Los Angeles Port of Embarkation (POE) during World War II. No information was discovered during review of the various exhibits in the museum.</p> <p>During a followup telephone call to the library, which had been closed on the day of our visit, the librarian, Susan, no last name released, could provide no information on the San Bernardino Engineer Depot and it's support role to the Los Angeles POE. She said the library would be interested in obtaining any information of that nature for their archives but stressed that they were primarily interested in maritime and nautical matters. I thanked her for her time and exchanged addresses and telephone numbers before terminating the conversation.</p>

SUMMARY:

I called the 259th EOD to determine whether they had ever responded to any reports of OEW in the area of the former San Bernardino Engineer Depot. SSG Jones told me he had reviewed the unit records for the last 2 years and had found no reports of visits to that area by the 259th EOD excepting VIP duty at the Community College. I thanked him for the time and information, exchanged telephone numbers and terminated the conversation.
